The San Diego Gas and Electric facility, in San Diego, California, has been used for, among other things, storage of PCB's and PCB contaminated materials. Storage time varies from 90-270 days. DOHS review of this file indicates that a TSCA inspection was performed in April, 1983, however, this is incorrect. The April, 1983, inspection was conducted at a different location operated by San Diego Electric Co., also in San Diego. Since there is not sufficient information regarding the conditions at the SDG&E site, the recommendation of this review is to refer the file to TSCA for its evaluation and possible action.
